Asian Society of Gynecologic Oncology

3rd International Workshop on Gynecologic Oncology

Patient-derived Tumor Xenograft (PDX) Model for Gynecologic Cancer

Jeong-Won Lee, MD, PhD.

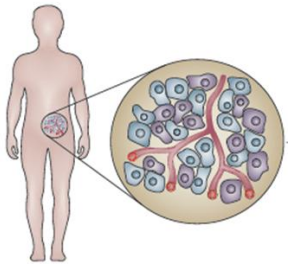
Department of Obstetrics & Gynecology, Samsung Medical Center,

Sungkyunkwan University School of Medicine, Seoul, Korea

Agenda

- Introduction: Patient-derived Tumor Xenografts (PDX) Models
- Methods and Results for the Development of PDX
  - Ovarian Cancer / Endometrial Cancer / Cervical Cancer
- Limitations
- Summary

PDX = AVATAR Mouse



Need of PDX model

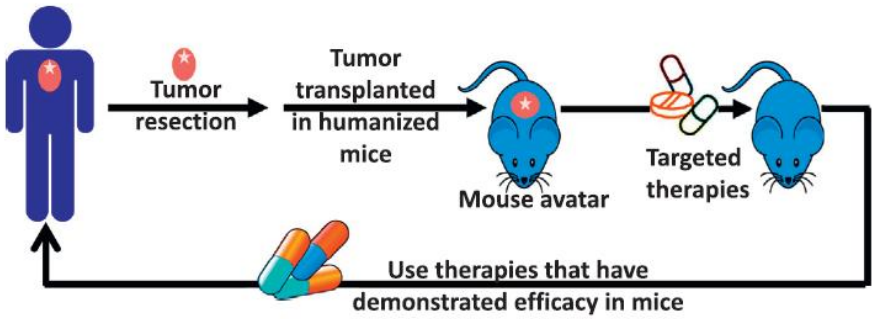
- As animal cancer model, **xenografts of established cancer cell lines**

  → not accurately mimic the behavior in cancer patients

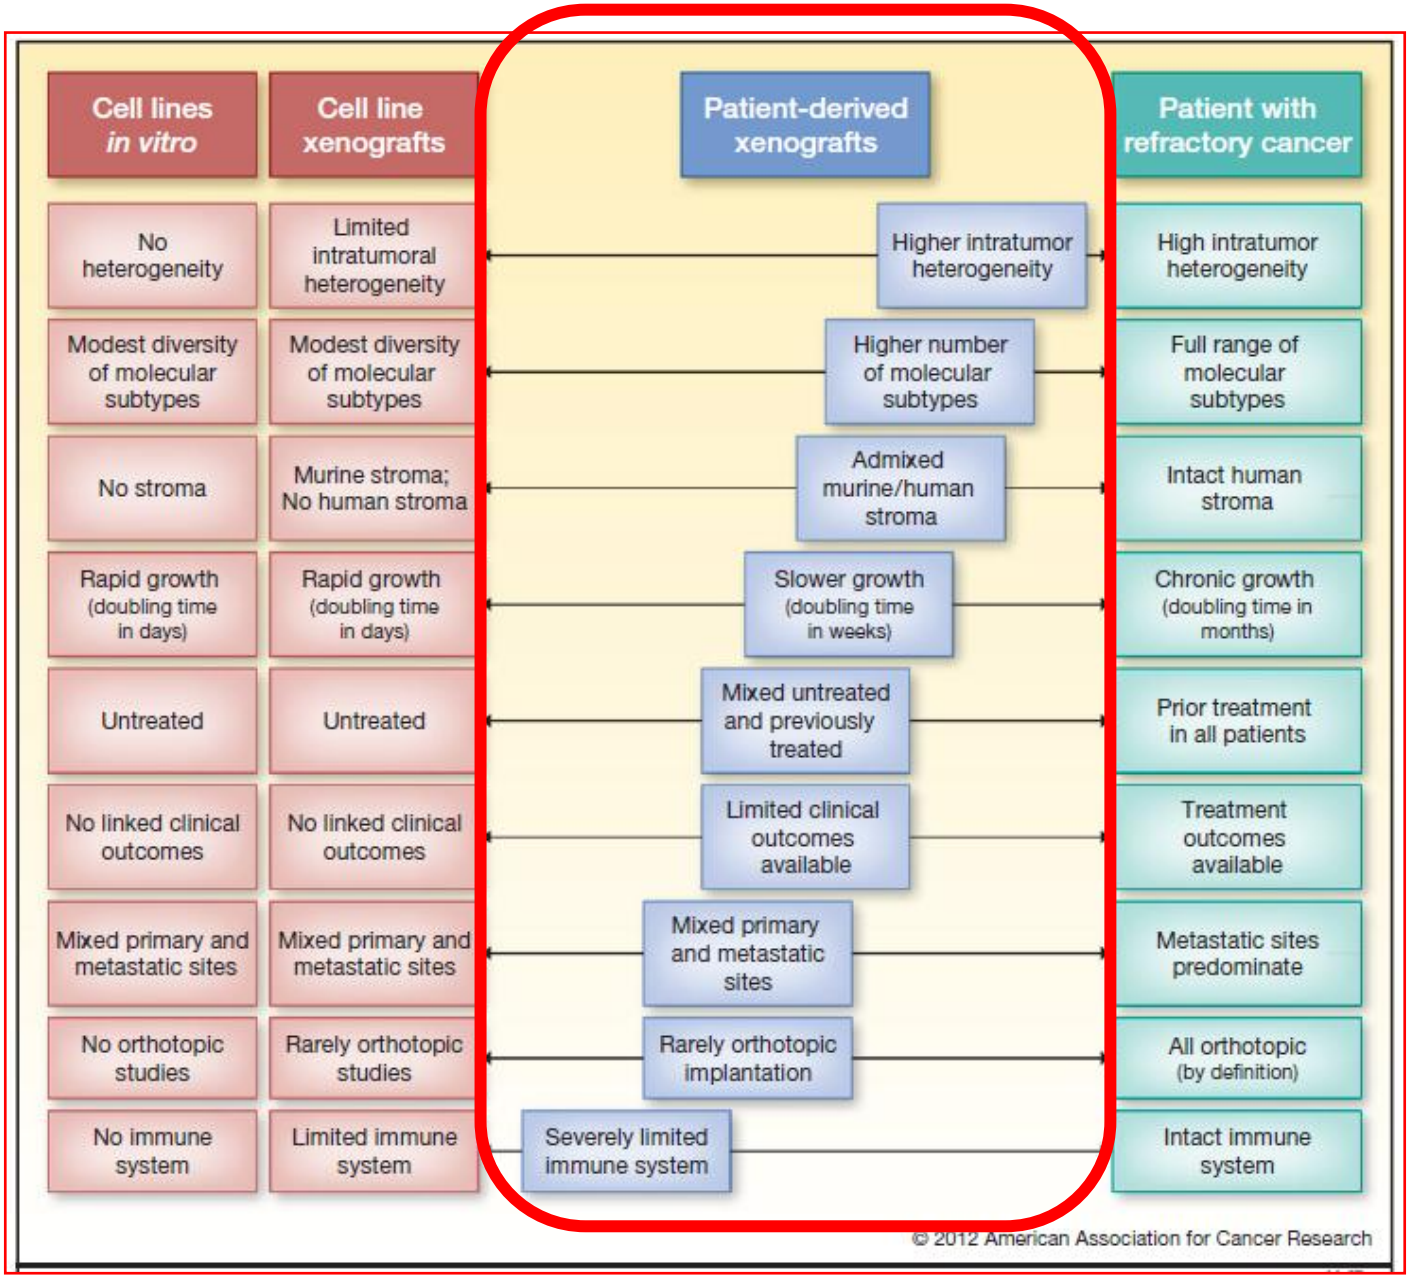
  → not properly predict the clinical efficacy of anticancer agents.

- **PDX models** are built by *transplanting original patient's tumor tissue into immunodeficient mice.*

  → can **better preserve the morphology & gene expression of patient's tumor**

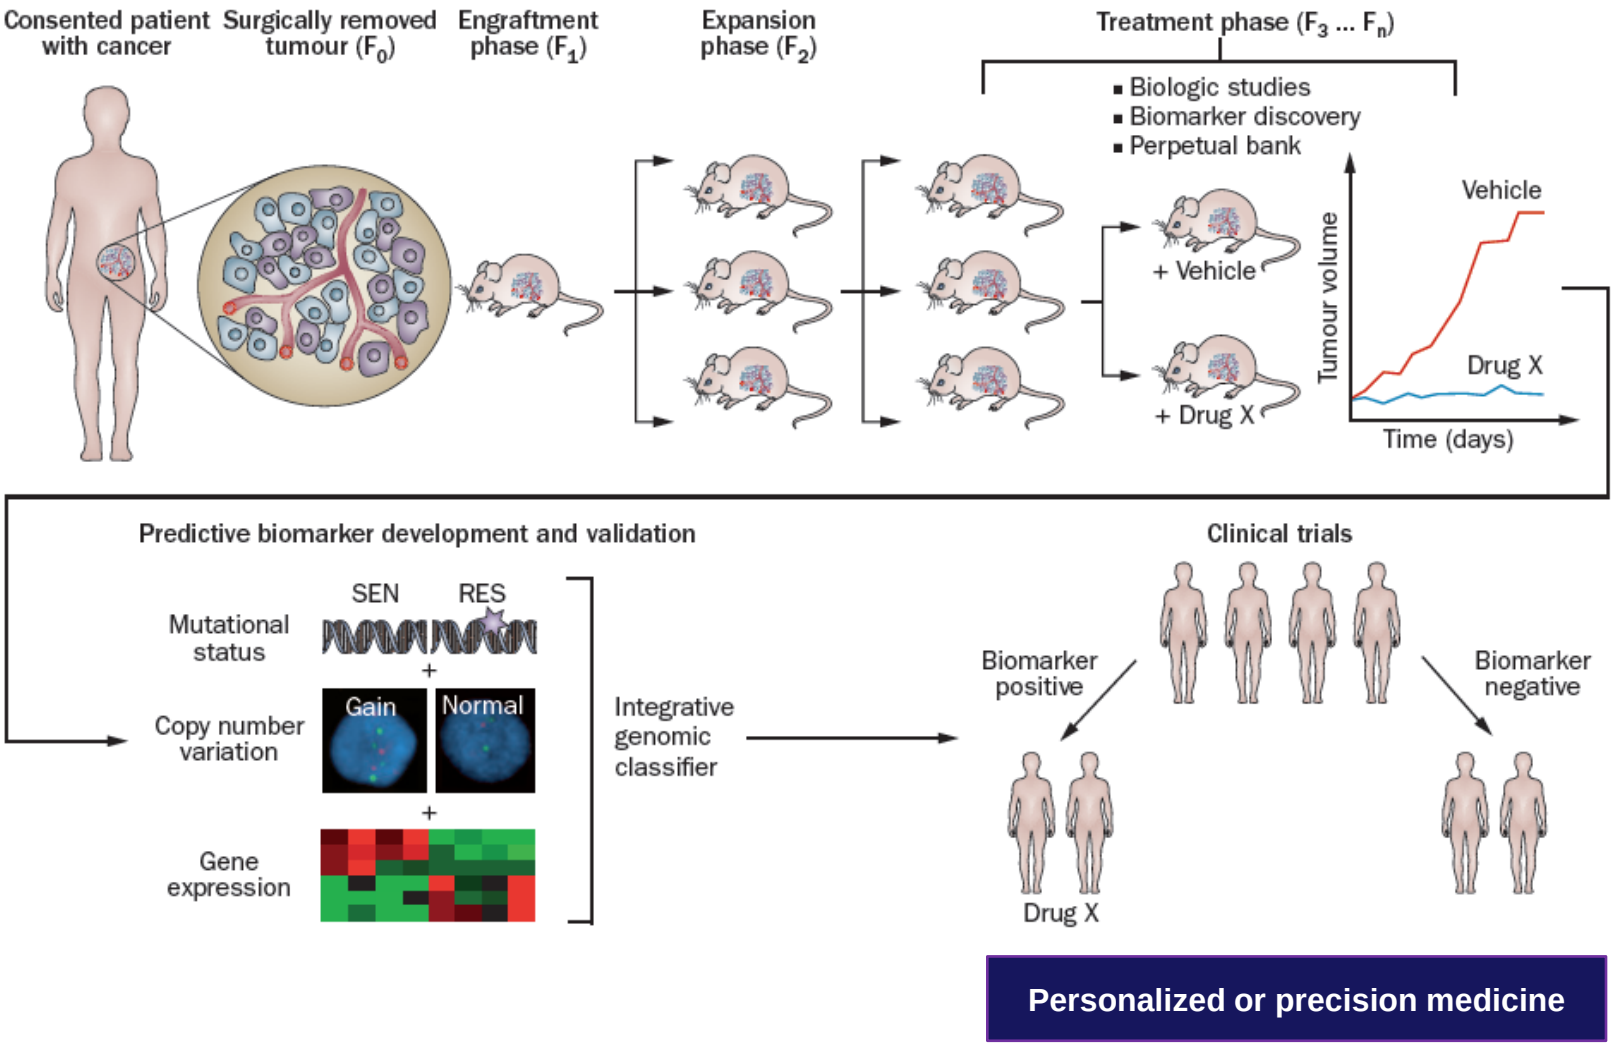


"Avatars / PDX" : mice or other animals with human tissue implanted onto them



The promise of patient-derived xenografts, CCR 2012

Establishment and testing of PDX models.

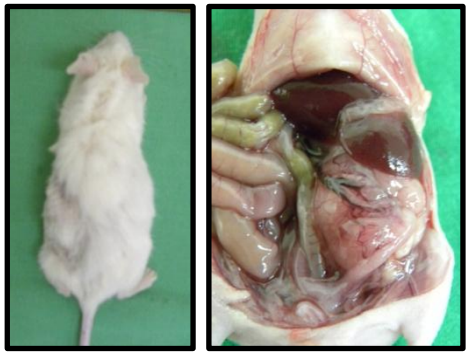


Tentler J.J. et al. (2012) Nat. Rev. Clin. Oncol.

Pilot study

- **Implantation site ?**
  - *Intraperitoneal*
  - *Gonadal fat pad*
  - *Ovary intrabursa*
  - √ *Subrenal capsule*
- **Mouse ?**
  - √ *NOG*
  - √ *Nude*
- **Patient samples ?**
  - *Ascites*
  - √ *Primary tissue*

Gonadal fat pad



Subrenal capsule

Ovary intrabursa

In vivo tumorigenicity rate

	OV CA	CX CA	EM CA
1. Total cases	57	26	14
2. Engraftment rates (%)	47.4% (27)	46.2% (12)	42.9% (6)
3. Mean time to M1	5.7 (1.9 – 14.4) month	5.5 month	4 month
4. Mean no. mouse developed	3/5		

Pathology of tumors

*2011.11~2014.8

	Histopathology of primary tumor / Grade	Generation of PDX
1	Serous papillary adenocarcinoma / 3	19
2	Invasive squamous cell carcinoma / -	11
3	Endometrioid adenocarcinoma / 3	4
4	Carcinosarcoma / 3	1
5	Malignant mixed Mullerian tumor / 3	3
6	Undifferentiated carcinoma	1
7	Endocervical adenocarcinoma	1
8	Metastatic adenocarcinoma / 3	1
9	Clear cell carcinoma	3
10	Mixed serous and clear cell adenocarcinoma, endometrium	2
	Total	**45**

In vivo Tumorigenicity & Clinical Aggressiveness of Parental Tumors

- **N=63, EOC**
- Successful engraftment: 25
- Ongoing: 8
- Failed engraftment: 30, engraftment rate: 25/55 (45.6%)
- Median M1 day: 171 (58-431) days, 5.7 (1.9-14.4) months

Progression-free survival

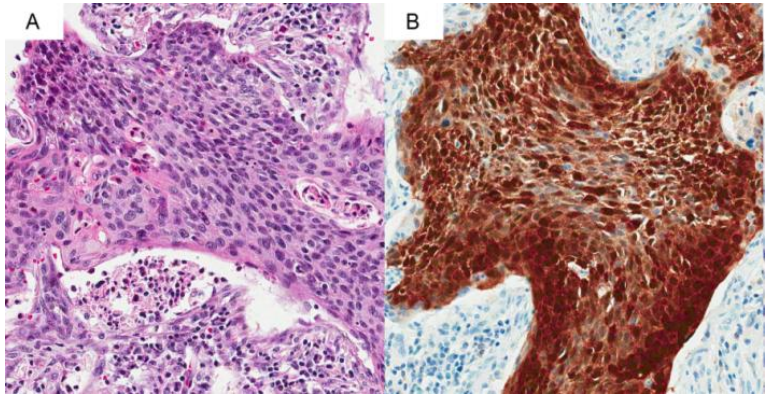
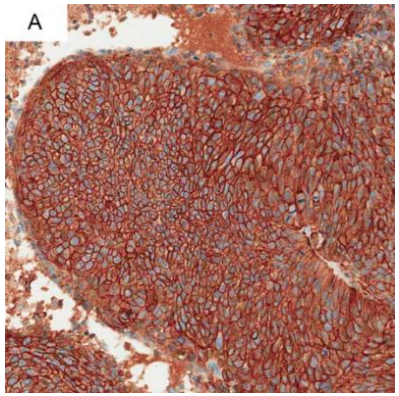
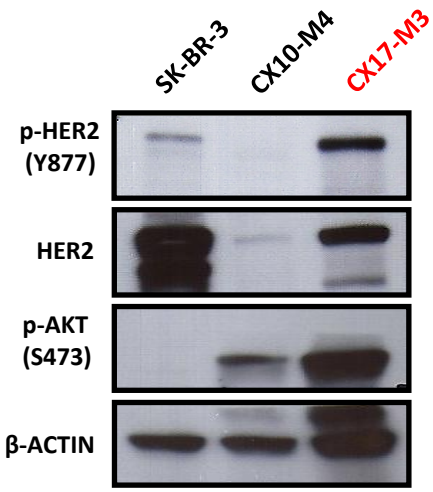
Patient's histology



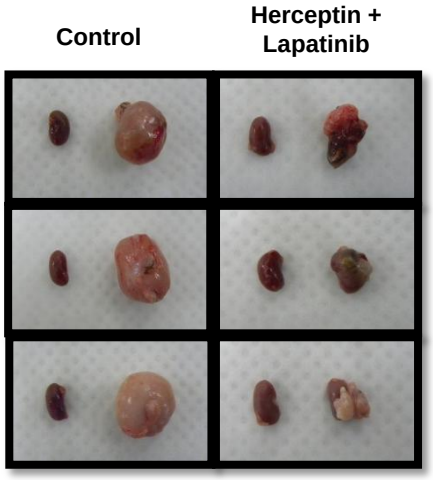
PDX's histology

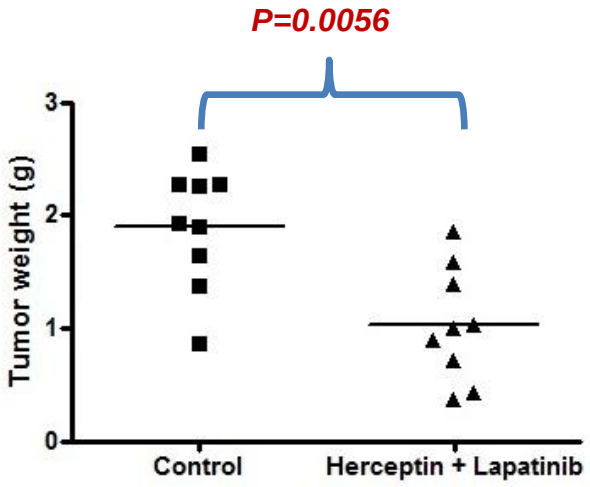




***PDX testing*:**

The effects of Herceptin & Lapatinib on tumor growth in PDX (CX-17-M4)





Limitation of PDX model

- The requirement to use **immunosuppressed mice**.
- **Heterotopic** → Orthotopic ?
- Tumor graft **latency** (4-6 Mo)
- **Engraftment rates** → 45-50% depending on the tumor type
- Cost and labor intensive ?

Summary

- PDX models may be **superior** to cell line xenograft because of maintaining similarities for pathologic and genetic features to the parental tumors.

- **Genomic characterization** with exome sequencing or NGS

- Focus to **refractory & recurrent cancer.**

- PDX models offer **a powerful tool** for studying **tumor biology** & **good platform** to provide **personalized medicine**

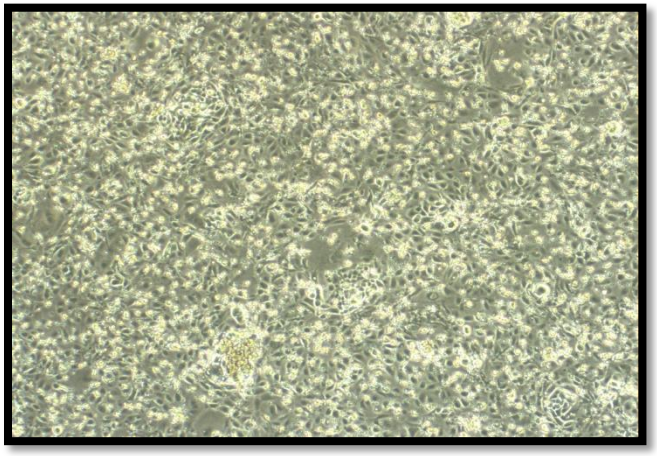
Thank you for your attention

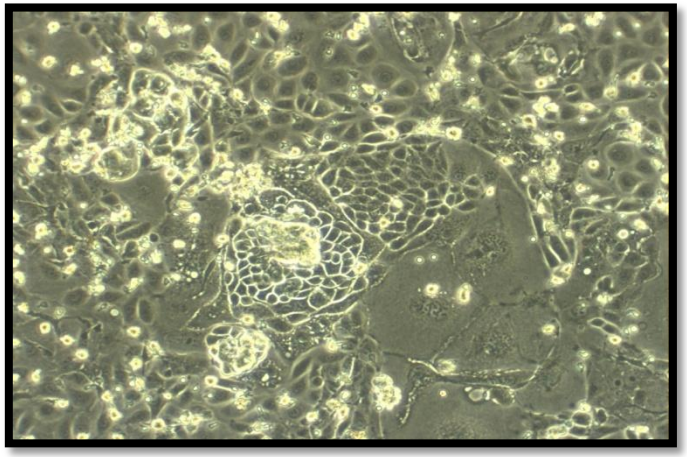
Translational Research Team of Gynecologic Cancer, SMC

Pilot Study for the development of PDX (OV CA)

Samples	Method	Tumorigenesis
1. Ascites cultured cells (6 cases)	Intraperitoneal injection	1 case
2. Primary ovarian cancer tissues (8 cases)		0

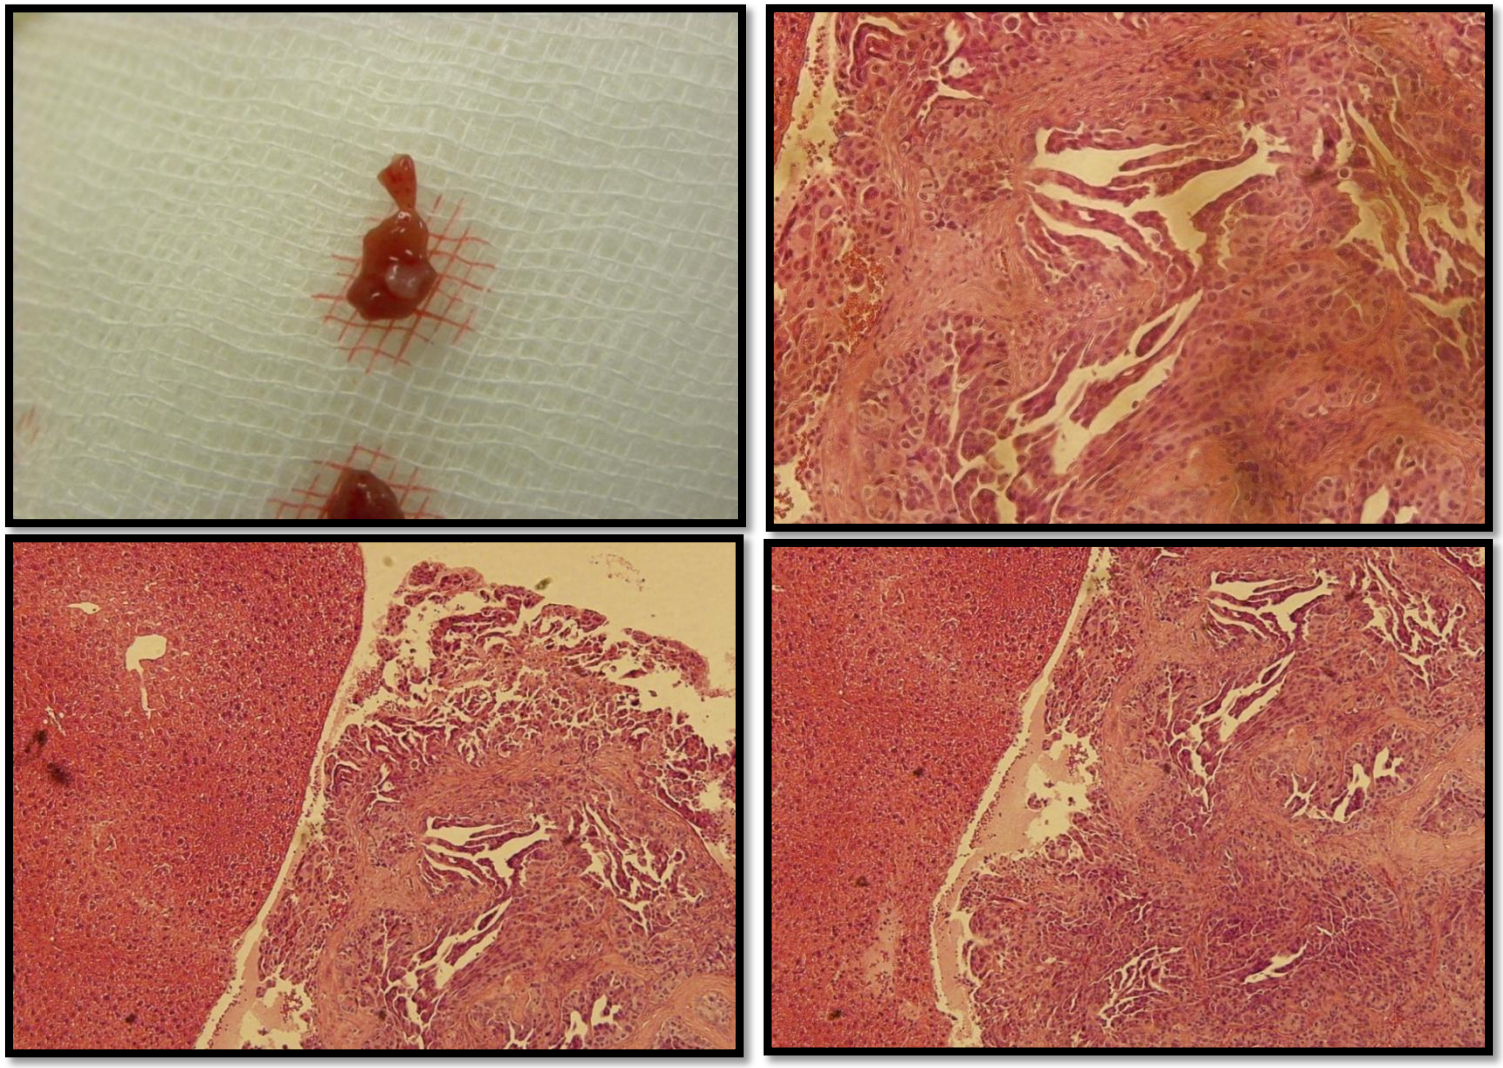
Ascites cell (cultured, passage 0)





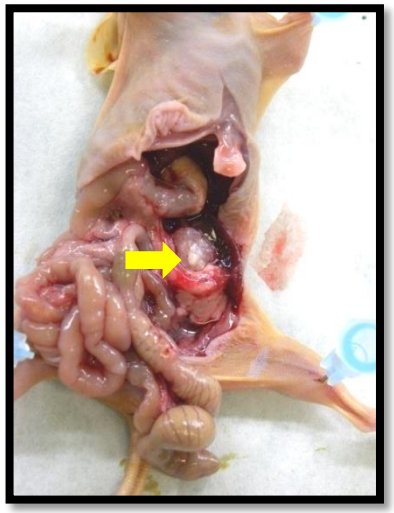
Tumor development from patients-derived OV CA ascites cells (IP injection)

1st Sacrifice (2010.11.4, 143days) : mouse #1



Tumor development from patients-derived OV CA ascites cells (IP injection)

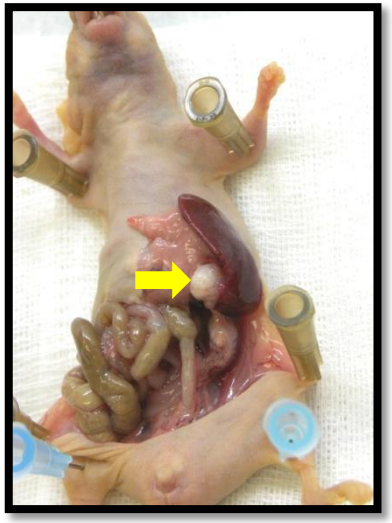
2nd Sacrifice (2011.1.25, 224 days) **: 2 mice**

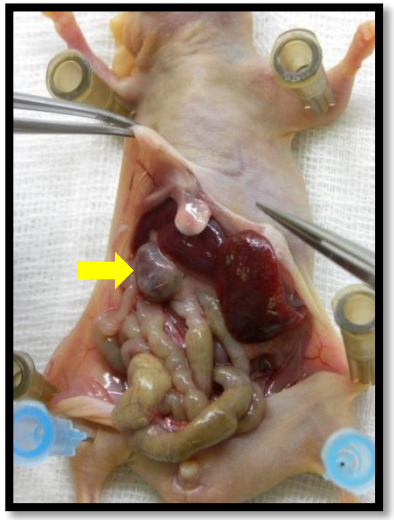


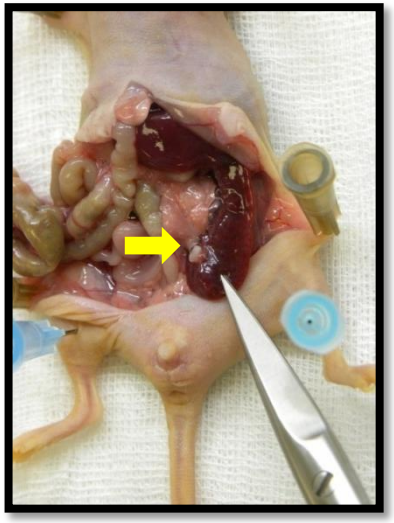
Mouse#2
liver, spleen,
pelvis, mesentery

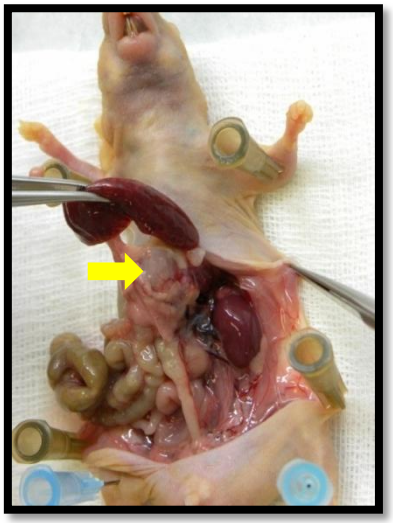
Mouse#3
liver, spleen,
pancreas, omentum

Take 7-8 month









PDX Therapy: C-MET Inhibitor in Ovarian CCC

- PDX Nol : OV-64-M4
- Cell type : Clear cell carcinoma
